

Acai Superfood

Açai pronounced (a-sigh-ee) is a small, dark purple fruit that grows in the rainforests of Brazil. The acai berry is very unique because it's packed with more disease-fighting antioxidants than any other fruit on earth. Acai's Anti-Oxidant factors play a large role in the maintenance of our vascular cardiac system, which is important for better blood circulation. Acai also contains essential minerals such as iron, potassium, phosphorus and calcium and is loaded with vitamins, fiber and proteins for total health of the mind and body. Acai is a real superfood!
